DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 3, and 4 are rejected under 35 U.S.C. 102(b) as being anticipated by Ishii et al.

The patent by Ishii et al. (4,907,546) shows an engine driven work machine with an engine (4), a work machine (5) driven by the engine, and electrical components (84) belonging to the work machine. An open machine accommodating section is provided in a main body of the work machine and accommodates an engine and a work machine driven by the engine. A control box (2) for accommodating part of the engine, electrical components of the work machine, and a fuel tank is provided above the machine accommodating section, and has a ventilation path that connects to a fan (72) fitted to the engine. The electrical components and the fuel tank are arranged along the ventilation path.

The ventilation path is connected to an engine cooling air passage of the work machine and a muffler cooling air passage.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Application/Control Number: 10/800,658

Art Unit: 3747

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 2 and 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ishii et al. in view of Fukuda et al.

The patent by Ishii et al. does not show that the electrical components are provided in any order along the ventilation path. The patent by Fukuda et al. (6,775,981) shows the arrangement of electrical components in the ventilation path is such that the high heat generating electronics are further downstream (Col. 8, lines 38-53). The cross sectional area of the ventilation path decreases as its distance from the inlet increases.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jason Benton whose telephone number is (571) 272-4838. The examiner can normally be reached on flex.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Henry Yuen can be reached on (571) 272-4856. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Application/Control Number: 10/800,658 Page 4

Art Unit: 3747

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
